THE NATURAL WEIGHT LOSS SYSTEM

In America, there are a plethora of businesses that constitute a multi-billion dollar economic niche called "the weight loss industry". This industry thrives on fat people just as the drug and medical industries thrive on sick people. There are approximately 80 million Americans recognized as being obese, that is, individuals who are more than 25% over their natural weight set-point. Because we have developed a "fat image" of how people should look, individuals what are normal are looked upon as being too thin. Naturally, breast-fed babies are considered too small.

This information puts emphasis on natural weight loss methods. If the overweight understands why they have become overweight, if they know the principles that dispose to weight loss or weight gain, then lasting weight loss is achievable. This report introduces the "**Distress/Obesity Syndrome**" because one proceeds out of the other. Minds and bodies become warped and misshapen in their perspectives and looks. The nature of addictions dispose us to constantly consume toxic substances as in drugs and junk foods. Toxic substances distress the body. Because this distress triggers the survival mechanism, one of which is feast/famine response. Abnormal reserves tend to be put on as providence against famine. Alas, the distress never ends and famine never comes. Addictive substances are so rife in our diet that the "**Distress/Obesity Syndrome**" never ceases! Attempting to lose weight while the syndrome's causes are still in force doom almost all weight loss programs to failure. Once you understand cause and effect you can become the attractive and admired person you were meant to be.
